

"TO WEALTH"

J.L. Rapholz
B.A., M.S. Economics

SAMPLE MARKET LETTER

The dollar's powerful upsurge could be coming to an end.

Since the financial crisis intensified last fall, the dollar has been on a tear. It rose against a host of currencies as investors around the world sought safety and Americans brought money home, buying dollars in the process.

David Klein

Now clouds are gathering over the buck. Last week, the dollar was rocked by the announcement that the U.S. Federal

Reserve will buy up to \$300 billion in Treasury bonds, an unprecedented move to lower borrowing costs and, thereby, stimulate the moribund U.S. economy. It's also akin to printing money -- raising fears of inflation down the road, which would erode the dollar's worth.

Those worries produced the dollar's second-worst week against the euro since the creation of the European currency a decade ago. One euro now buys about \$1.36, up from \$1.29 a week ago, although that's still a long way from the dollar's low point in the middle of last year. Back then, one euro bought a record \$1.60.

Why the Dollar Matters

For Americans, the dollar's future course will impact many decisions, large and small. Exchange rates matter whether it's someone planning a visit to London or a company hoping to sell its products in Brazil.

The buck's resurgence since last summer has proven a source of relief where overseas travel is concerned, instantly making trips across the Atlantic less expensive.

It has been a less-welcome development for investments in foreign stocks and bonds. Because these assets are denominated in foreign currencies, they translate into fewer dollars when such currencies weaken. That phenomenon helped compound the large losses many investors suffered on their overseas portfolios during last year's market meltdown.

Dollar Headed Down Again?

U.S. dollar index (J.P. Morgan trade-weighted)

Source: Thomson Reuters Datastream via WSJ Market Data Group

A declining dollar, by contrast, would affect Americans in different ways. Overseas travelers will be pinched (\$10 lattes, anyone?). U.S. companies that sell products abroad might see an uptick in orders, as their exports become more competitive, while prices for foreign-made goods could rise. Investors in foreign stocks and bonds, meanwhile, would see a fillip in their returns.

In the Crosshairs

After strengthening for seven months, the dollar now finds itself in the crosshairs of the Fed's efforts to combat a deep recession.

Faced with a struggling economy and a dysfunctional financial system, the Fed is essentially creating money to fund a series of programs aimed at getting credit flowing. The move to buy Treasury bonds is the latest and most aggressive of such steps.

The U.S. is tackling the quantity of money in the financial system rather than its cost -- in other words, the interest rate. Indeed, the Fed no longer has any room to maneuver with its traditional policy lever of interest rates: The target for its benchmark interest rate has already been lowered to between 0% and 0.25%.

One of the major risks the Fed is trying to avert is that of a vicious cycle of falling prices and contracting output. But investors worry that by pushing so much money into the economy, the Fed is actually sowing the seeds of a bout of high inflation once the economy shows any signs of life.

"It's very difficult to pump this money in and pull it out later," says Kenneth Rogoff, a professor of economics at Harvard University. "There's every risk of an overshoot."

That's the worry now weighing on the dollar. Currency investors say the dollar will likely weaken from here.

Last week's slide in the buck "is the start of a move in the dollar, not the end," says David Gilmore of FX Analytics, a Connecticut research firm. But while he expects further weakness, he adds, "it's not the beginning of the end of the U.S. currency."

The global context will also be critical to the buck's fortunes. With the world economy in dire straits, other central banks may follow the Fed's lead in bolstering their own malfunctioning financial systems.

Already, central banks in the U.K., Japan, and Switzerland have adopted similarly unconventional methods to jumpstart their economies, and others may follow. If they do, the dollar may not weaken so much against such currencies.

"I don't think it's a rosy story anywhere, quite frankly," says Lisa Scott-Smith of Millennium Global Investments, a London investment firm specializing in currencies. That's important because, unlike stocks or bonds, the foreign-exchange market is "a relative game -- you can't buy every currency and sell every currency."

What It Means for You

For American consumers and investors, it adds up to a complicated equation.

If you're planning travel abroad in the near future, especially to Europe, it might make sense to lock in prices by paying for hotels or tours ahead of time. While it's always difficult to predict the course of currencies, experts are forecasting that the dollar will weaken against the euro in the next few months.

If your biggest fear is that a bout of energetic inflation will follow the current recession, the dollar looks like a bad bet. One option is to seek out traditional hedges against rising prices and a falling dollar, including gold and other commodities. Several exchange-traded funds offer such exposure.

Meanwhile, if weakness in the U.S. dollar proves pronounced, it could provide a boost to foreign-stock investments. That might produce a return to the pattern that reigned before the financial crisis, when overseas stocks outperformed U.S. stocks as the dollar declined.

That hasn't been the case over the past year: The average world-stock mutual fund has returned a negative 44%, while the average diversified U.S.-stock fund has lost 38%, according to research firm Lipper.

CHINA'S IMMEDIATE REACTION:

China is calling for a global currency to replace the dominant dollar, showing a growing assertiveness on revamping the world economy ahead of the upcoming London summit on the world's financial crisis.

This surprise proposal by Beijing's central bank governor reflects unease about its vast holdings of U.S. Treasury bonds and adds to Chinese pressure to overhaul the global financial system which is dominated by the U.S. dollar and Western governments.

An essay released by the bank of Zhou Wtauchuan recommended creating a new currency which is made up of a basket of global currencies and controlled by the International Monetary Fund and said it would help "to achieve the objective of safeguarding global economic and financial stability."

THINKING OUT LOUD: I doubt very seriously that China's plan will take place. The world has once again demonstrated its feelings about the security of the U.S. dollar, with citizens from every country on earth rushing in to buy up dollars - as the world's financial crisis unfolds!

Personally, I believe that Old Bald Headed Ben Bernanky deserves a medal for the way he's handled this country's and in some ways, the world's financial crisis.

By the time Bernanky is finished cleaning up J. Alfred Greenspan's and George Bush's very smelly mess - he will have created over \$5 Trillion worth of dollars out of thin air

by simply printing them. Anyone capable of adding one and one and coming up with two - which in this case amounts to buckets and barrels full of inflation, that is going to be extremely difficult to mop up, after the world economy recovers - had better start planning ahead.

In my humble opinion this mess is going to end in another bubble. J. Alfred Greenspan allowed the "DOT-COM BUBBLE" to move itself right into a HOUSING BUBBLE with George W. Bush's blessing! The DOT-COM-BUBBLE burst because technology stocks inflated far beyond their realistic values, much in the same way as what took place in the housing bubble. When the DOT-COM-BUBBLE burst, Greenspan was afraid of a very serious recession or even a depression taking place, so to avert this, he lowered interest rates to zero and pumped zillions of newly printed dollars into the system. This action caused too many dollars to chase too few houses and the result was highly inflated housing prices that finally burst. Thus, we have today's recession and the 'powers that be up in Washington Town' doing exactly the same thing that Greenspan did a decade ago!

I'm not implying that they are doing the wrong thing, in fact if they did not take the actions that were taken and are still being taken - we'd probably be in a very deep depression by now! However, the end result of all this money that's being printed and extremely low interest rates will end up in a brand new bubble - A COMMODITIES BUBBLE and if you've got 20-20 vision you'll start buying all the commodities you can, with every buck you can beg, borrow or steal. I don't care if you invest in sheep, pork bellies, wheat, cotton, cows, gold, silver, copper, oil or goats, because every form of commodity on this earth is going to go absolutely nuts! This new bubble is going to start because of the untold billions of new "Asain" middle class citizens who are about to jump into the race for a better way of life. They will start the bubble and all of this new money and low interest rates will do a lot more than just fan the flames!

SHOPPING IDEAS:

MINEFINDERS, (NYSE: MFN), recent price \$6.55, phone toll free 1-866-687-6263, Web Site www.minefinders.com, 52 week Hi: \$13.80 Lo \$2.58, Shares Outstanding 59,006,956:

COMPANY HIGHLIGHTS:

100% ownership of the multi-million ounce Dolores gold and silver mine in Chihuahua, Mexico.

The first gold and silver production commenced at the Dolores Mine in November, 2008 with commercial production expected in the first half of 2009.

The Dolores Mine has over a 15 year life as an open pit mine with additional future potential as a high-grade underground

mine. Life-of-mine average cash cost of \$297 per gold ounce at a 52 to one silver to gold ratio.

VELOCITY MINERALS LTD, (TSX: VLC), recent price \$0.14, phone toll free 1-866-920-0567, Web Site www.velocityminerals.com, 52 week Hi: \$0.90 Lo: \$0.10, Shares Outstanding 29,082,833:

Velocity is focused on the acquisition and development of advanced or high grade molybdenum mineral properties. They presently own the mineral rights to two mining properties in northern British Columbia - Mt Haskins and Cassiar Moly - and are actively pursuing other properties in North America.

Mt. Haskin contains a granite pluton with a contact zone that carries a high level of molybdenite mineralization and several nearby skarn zones that have a high concentration of zinc, copper, lead, silver, tin and bismuth values.

At Cassair Moly previous work, while not sufficient enough to estimate a reserve, discovered several high grade occurrences on the surface, which ran from 0.20% Moly across 12 feet to 3.6% across six feet and underground which ran up to 4.17% Moly over a meter and had a combined average grade across 3 meters of 1.54% Moly. The company is planning an exploration program, which includes drilling, to determine the size of the mineralized zone.

HATHOR EXPLORATION, LTD., (TSX-V: HAT), recent price \$1.60, phone 403-684-6707, Web Site WWW.HATHOR.CA, 52 week high HI: \$4.40 LO \$1.10, shares outstanding 85,959,926:

High grade uranium intersections including individual assays: 6.5m grading 20.41%, 1.5m grading 10.02%, 9m grading 10.06%, 11.8 grading 5.29%, 69m grading 2.33%, 46m grading 3.25%, 23m grading 11.23%, 12.5m grading 18.05%, 7m grading 28.14%

Mineralization is open along current 199 meter plus strike length

2009 aggressive drill program

Working capital \$35 million

Leading the way in utilizing state-of-the-art high tech exploration methods

Highly experienced and motivated exploration/technical team

Extensive institutional research and analyst coverage

10 additional uranium projects strategically located in the Athabasca Basin: The Athabasca Basin has the most prospective geology in the world to explore for high grade, unconformity-style uranium deposits.

PLATINUM GROUP METALS, LTD., (AMERICAN STOCK EXCHANGE: PLG), recent price \$0.89, shares outstanding, 85,959,926, phone 1-866-899-5450, Web Site www.platinumgroupmetals.net, 52 week HI: \$3.32 – LO \$0.60:

The company is earning a 74% interest on a ten million ounce, high grade, near-surface platinum group metals deposit on the famous Meresky Reef in South Africa. With a bankable feasibility in hand the company continues to strive toward the goal of becoming a platinum producer but is trying very hard to avoid the “Teddy bear syndrome.”

According to the C.E.O., this syndrome occurs when mining companies become too focused on developing an asset, clinging to it without considering putting it up for sale, “I think the correct strategy is to have both options available to you at all times, he said.”

The mine is slated to produce 235,000 to 271,000 ounces of combined platinum, palladium, rhodium and gold in concentrate per year for 22 years. Averaging operating costs on these four metals is estimated at \$239 per ounce for the life of the mine.

Global demand for platinum is forecast to increase and automotive use is expected to be the main force behind this growth. As clean air standards expand, more platinum will be used to clean up exhaust emissions.

POSSIBLY A HOT PENNY STOCK PLAY!:

HAWTHORNE GOLD, (OTCBB: HWTGF), recent price \$0.20, phone 778-945-2106, Web Site www.hawthornegold.com, 52 WEEK HI \$2.10 LO \$0.15, shares outstanding 73,912,347:

HAWTHORNE HITS CASSIAR HIGH-GRADE:

Hawthorne Gold Corp. has released additional high-grade intercepts from the two farthest step-out holes of the 2008 diamond drill project at the Casiar Gold Camp, in Northern British Columbia.

A few of the intercepts assayed at over 3 ounces per ton! The company is very pleased to see encouraging high-grade intercepts and lengths from the recent drilling program.

The highest grade gold assays were returned from quartz-carbonate veins with visible gold often accompanied by sulphides. In order of abundance, the quartz-carbonate veins contained medium to coarse-grained pyrites and sphalerite,

with lesser amounts of tetrahedrite and chalcopyrite. Visible gold has been identified in the veins and occurs in several different ways.

Those of you who enjoy the sport of “high-speculation” should roll up your sleeves and dig into this one but keep in mind that fire doesn’t always occur because of smoke – it’s generally the other way around! This issue is definitely not a recommended investment for widows and orphans!

RUBICON MINERALS CORP., (NYSE: RBY), recent price \$1.00, phone toll free 1-866-365-4706, Web Site www.rubiconminerals.com, 52 Week Hi \$1.92 Lo \$0.70, shares outstanding 181,400,000:

“RUBICON REPORTS BONANZA GOLD GRADES AT RED LAKE:”

David Adamson, President/CEO, Rubicon Minerals Corp., reports new results from on-going drilling at its 100%-controlled Phoenix Gold Project, Red Lake Gold District, Ontario, Canada. Drilling is being carried out around the F2 gold zone from which significant high-grade and BONANZA-GRADE gold intercepts have been reported laterally over 580 meters and to depths of up to 1.101 meters below surface.

Drilling 180 to 300 meters northeast of the core F2 Zone intersected bonanza gold grades at shallow depths in a potential northeastern extension of the F2 Zone. New intercepts include 5.07 ounce per ton gold over 8.2 feet, 7.60 ounce per ton gold over 1.6 feet and 1.25 ounce per ton gold over 0.5 meters. High grade gold veins are observed within broad gold zones which include many more evidences of high grade gold.

As such, it represents a new target type. Taken together, the results from the holes drilled to date in this area suggest that high grade gold lies in abundance within this target area. Further drilling during the first half of 2009 will indicate the tonnage available.

RIVERSIDE & KINROSS CREATE MEXICAN ALLIANCE:

Riverside Resources, Inc., (TSXV: RR), recent price \$1.75, phone toll free 1-888-700-0477, Web Site www.rainyriverresources.com, 52 week Hi \$4.75 Lo \$0.75, shares outstanding 17,830,150 & Kinross Gold Corp., (NYSE: KGC), recent price \$18.00, phone toll free 1-866-561-3636, Web Site www.kinross.com, 52 week Hi \$25.50 Lo \$7.00, shares outstanding 53,175,000:

NOTE: “Economic Advice” recommended Kinross Gold in June of 2004 as a strong buy at \$2.00 per share, “PICK OF THE LITTER” number 23.. This publication has never recommended Riverside Resources, Inc. until today and we are issuing a strong buy on this stock!

The above two companies have formed a joint venture that will focus on the Mesa Central Region of Mexico. The general terms of this alliance recognize Riverside's historic work in Mexico, as well as its proprietary database and on-going field programs. Kinross will invest \$800,000 and Riverside will invest \$300,000 to be used for exploration for precious metals targets in the Mesa Region.

The majority of Mexico's silver production over the last fifty years comes from the Mesa Region. In addition gold has been discovered and produced here.

Riverside has about \$3.2 million in working capital and no debt. Riverside is also advancing its two significantly potential open pit gold projects in the Sugarloaf Peak Mining District near Quartzsite, Arizona.

Please note, I seldom issue a strong buy recommendation on any stock however, the management of KINROSS has some real sharp operators and they wouldn't invest a nickel with any company unless they felt it was going to be a WINNING DEAL! And, because of this, I've done some very deep research on this company and its projects.

Yes, I plan to put some of my money into this company however, I strongly advise you not to invest your hard-earned money here without rolling up your sleeves and doing your own homework. Please remember that your own god-given-brain is the best investment advisor you'll ever come in contact with and that if you lose any money here it won't be my money that you're losing!

I've been getting a lot of requests for inexpensive precious metals mining stocks recently so I'll throw a couple of gambles out for you perusal. Penny stocks may go up considerably or go totally broke. They are not for people with weak hearts and they are definitely not recommend investments for widows and orphans!

DOUGLAS LAKE MINERALS, (OTCBB: DLKM), recent price \$0.15, phone toll free 1-866-734-7026, Web Site www.douglaslakeminerals.com, 52 week Hi \$1.03 Lo \$0.12, shares outstanding 73,100,000 & CANACO RESOURCES, INC. (TSXV: CAN), recent price \$0.04 phone toll free 1-866-488-0822, Web SITE www.canaco.cca, 52 week Hi \$0.32 Lo \$0.04, shares outstanding 102,010,000:

DOUGLAS LAKE MINERALS REPORTS ALLUVIAL GOLD RESULTS:

Harp Sangha, President/CEO of Douglas Lake Minerals, Inc. reports from 129 samples from the 100% owned Mkuvia Alluvial Gold Project, southeast Tanzania. The results averaged 3.6 grams of gold /cubic meter.

This project comprises four road-accessible prospecting licenses covering 430 square kilometers. Before the acquisition by

Douglas Lake, the property generated 150-200 ounces of gold per month using no mechanical equipment. Currently, four locations on the property are being sampled with a view to achieve commercial production later this year.

"The results of 3.6 grams per cubic metre exceeded our expectations as the economic cut-off grade for Mkuvia is 0.20 grams," said Sangha. "The sampling of the Mkuvia alluvials took place in December 2008 and was conducted by our Douglas Lake Tanzanian field crews. It consisted of 129 measured 0.3 cubic meter samples of gold bearing sand, and/or conglomerates. These samples were processed in the field to produce heavy mineral concentrates, split and then shipped to Eco-Tech Labs in British Columbia for analysis."

Sample results also confirmed that the concentrates contain platinum and palladium values. Analytical results from assaying the splits (fractions of the total concentrates recovered from individual samples) have been applied to total concentrate volumes to calculate gold grades in the conglomerates, which is in the primary mining target, is 4.6 grams/cubic meter, significantly higher than the average grade of the samples tested.

During the past six months, Douglas Lake's ongoing exploration program has indicated a gold mineralization area of six kilometers by 29 kilometers by 10 meters in depth, for about 1.74 million cubic meters. The mineralized area remains open for increases in gold mineralization in length, width and depth. Currently, there are an additional 225 samples in for assay testing and the company will release the results as they are completed and then evaluated.

Douglas Lake's partner, which owns 20% of the Company, is TIGMB, a subsidiary of the China Geological Survey, a department of the Chinese Ministry of Land and Resources.

In northwest Tanzania, preliminary geological results confirmed the presence of diamond alluvial gravels from the Magembe diamond property where Canaco Resources, Inc can earn a 75% interest in the property through cash and share payments and spending US \$2.5 million on exploration over four years .

To date 60 samples weighing a total of 12.4 tons have been processed from 45.9 tons of gravel from 220 samples collected in 2008. Forty one diamonds have been recovered from 12 of the 60 samples, with the largest stone weighing 0.22 carats. Results are evenly spread over the sample region, confirming the presence of diamondiferous gravels within the 900 meters by 100 meters area from where the processed samples were collected. Good luck to everyone, J.L. Rapholz.

This is the part of "my poor excuse for a market letter" where I try very hard to fatten up your pockets!

And all you have to do is select one or more of these publicly traded stocks, then wait until I write sell.

We do our best to keep you up to date on all these stocks. Less than one half of one percent of the world's investment

funds find their way into precious metals stocks, hence very little information is published on this subject. Please DO NOT INVEST in these stocks without subscribing to this market letter or another publication, which is able to keep you up-to-date on your investments. Information is power and without up-to-date information in the stock market, you are dead! And, if you never forget this information, you will be very far ahead of those who choose to throw their money to the wind!

“Published monthly since 1977”

Hi there, I'm James Raphael. And, if you've got the desire to learn how to make money by investing in precious metals and energy stocks, you've come to the right person!

I can teach you how to play this game for the maximum profit and I don't just tell you what to buy and sell, I explain every move you have to make and why it should be made. So, what's so great about my market letter, that can't be found any other place? I'm the only guy who writes about precious metals that has successfully launched two publicly traded mining companies, Raphael Silver, Inc. and J.R. Gold Mines, Inc. To be perfectly honest about it, the vast majority of those who write up precious metals can't tell a good ore body from a ripe cesspool! So do yourself a big favor – and stop listening to the coin traders and pickle salesman who are trying to pass themselves off as having a brain!

I've taught economics on the college level and managed a mutual fund that traded precious metals stocks for three years. My twenty years of mining experience includes prospecting, hand sampling, gold panning, diamond core drilling, blasting and assaying. I've also constructed gravity, bulk flotation, batch leaching and all the components of a milling and reduction facility.

Before becoming involved with gold and silver, prospecting, mining and reduction, I made my living as a professional investor and have written stock market advisory letters for over twenty years.

You are entitled to unlimited use of my web site, www.economicadviceinc.com. It has been designed to give you up to the minute information and assessments, on any stock traded on the New York, American, NASDAQ and most of the Canadian exchanges.

In summation, if you want the best advice available on precious metals and some pretty decent talk on energy (I was never in the oil business but, Raphael Silver, Inc. did own a coal mine for a brief time period), buy my market letter. I honestly do not believe that any better advice can be Bought, Borrowed or Stolen!!
